Bournemouth University

Avoid easy to guess passwords?

But, how to create complex passwords that are easy to remember?

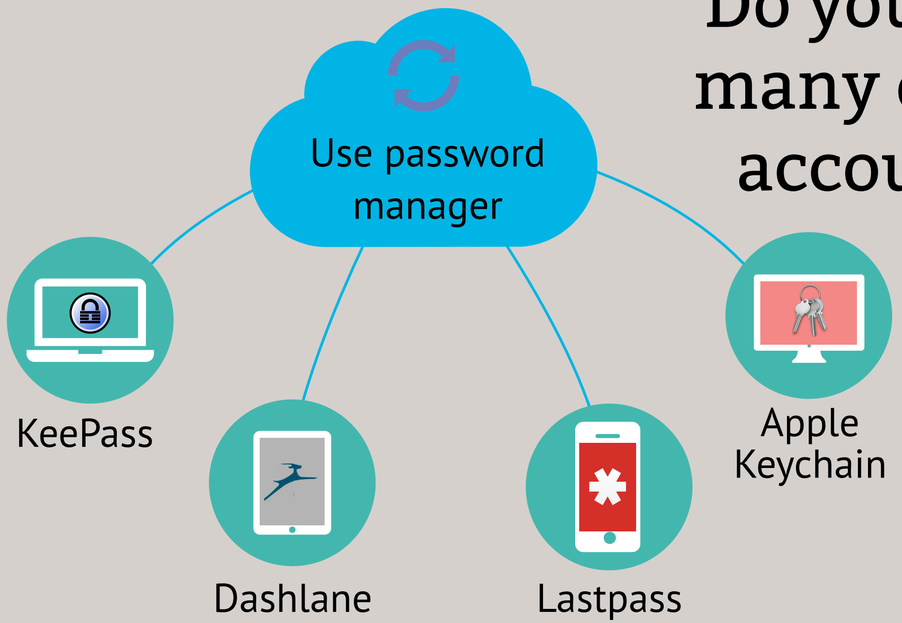
Step 1 Use a phrase or a sentence.
e.g. I eat a burger everyday

Step 2 Change some characters.
e.g. from character 'I' to '!'
eat = 34t
a = A
burger = Bur9er
everyday = e^eryday
space = *

Step 3 Now, combine them all.
e.g. !*34t*A*Bur9er*e^eryday
or !EatABur9erEveryday

Alternatively, follow NCSC's advice to use three random words. You just put them together, like '**7SwimSugarOak@**' or '**£8NutsHospitalDell**'.

Do you have many online accounts?



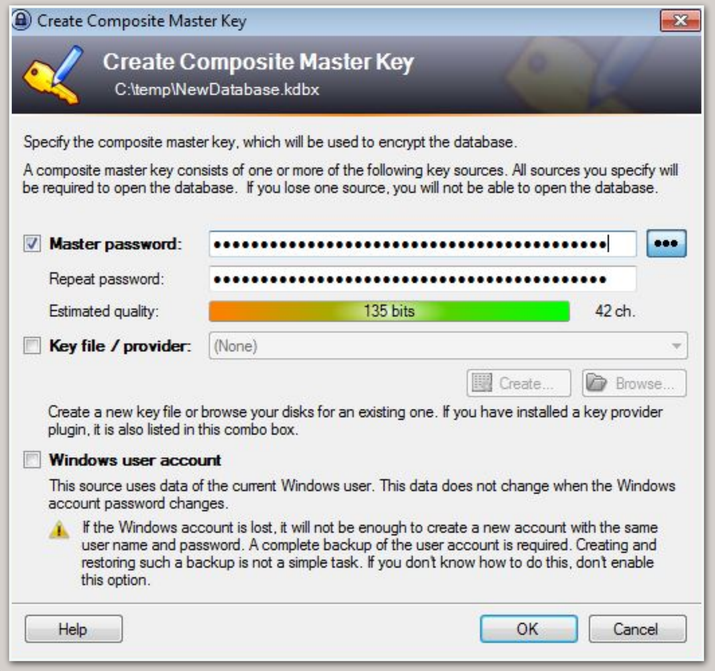
Note: the above are only few examples of password manager, and there are many commercial as well as free password managers available online.

Bournemouth University

KeePass is free for Windows, OSX and Linux

Get the **KeePass** from:
Personal devices - www.keepass.info
BU computers - snow.bournemoth.ac.uk

1

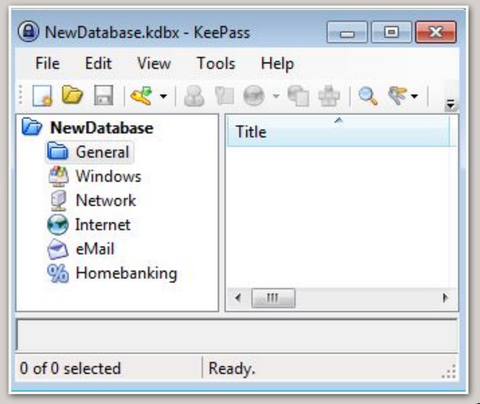


Set master password

2

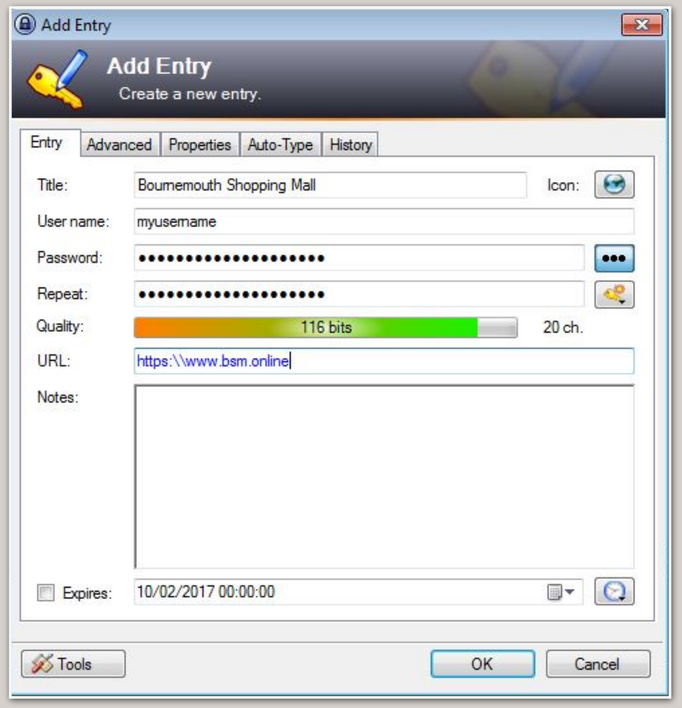
3

Use the master key to access the password database



4

Add entry



5

Enter the account details
